a Short local window
WCM, frame stacking
t
only recent observations
limited temporal context
b Dense spatiotemporal tokens
ViViT, TimeSformer, V-JEPA
t
tokens grow with history length
memory cost grows with time
c Recurrent latent state
World Models, PlaNet, Dreamer
t
past enters through a running state
sequential compression
d Fixed-query memory (ours)
STMemory
t
sparse span read into R fixed queries
wide span at constant size
